PARTS GUIDE

Parts marked with " $\underline{\wedge}$ " are important for maintaining the safety of the set. Be sure to replace these parts with specified ones for maintaining the safety and performance of the set.

# [1] SPECIFICATIONS

#### (1) Paper feed section

#### 1. Type

3-stage trays for paper feed

#### 2. Number of stages for paper feed

AR-D17	1-stage	
AR-D18	3-stage	-
AR-D19	2-stage	

#### 3. Paper size

A3/B4/A4/A4P/B5/B5P/A5/EXTRA (11 × 17/8.5 × 14/8.5 × 13/8.5 × 11/8.5 × 5.5/A4/EXTRA)

#### 4. Paper weight

64 - 105g/m<sup>2</sup>

#### 5. Paper capacity

500 sheets for each tray (Paper weight: 80g/m²)

#### 6. Paper set

Center reference

#### 7. Paper supply system

Front loading system, supplying from above

#### 8. Paper feed system

Paper lick-up system by the take-up roller, torque limiter separation system

#### 9. Paper transport speed

117mm/s – 198mm/s (The speed depends on the communication command from the copier.)

#### 10. Paper feed capacity

Full color	25 PPM (A4/LT) (A4 portrait)
Monochrome	32 PPM (A4/LT) (A4 portrait)

#### 11. Tray elevating time

Within 8 sec (for minimum quantity of paper set)

#### 12. Drive form

The drive motor (DC brushless motor) and the control PWB are incorporated in the desk.

#### 13. Operation control system

Controlled by the communication command from the copier.

#### 14. Paper transport path

Paper entry from the lower section of the copier

#### (2) Duplex section (AR-D19 only)

#### 1. Paper size

A3/B4/A4/A4R/B5/B5R/A5/EXTRA (11 × 17/8.5 × 14/8.5 × 13/8.5 × 11/8.5 × 11R/8.5 × 5.5/A4/EXTRA)

#### 2. Paper weight

64 - 200g/m<sup>2</sup>

#### 3. Paper transport speed

58.5mm/s (Heavy paper), 117mm/s to 550mm/s (Normal paper)

#### 4. Drive form

Transport drive	Stepping motor (Hybrid type)	
Alignment drive	Stepping motor (PM type)	

#### 5. Operation control system

Controlled by the communication command from the copier through the desk control PWB.

#### (3) Common sections

#### 1. Power source

5V and 24V are supplied from the copier.

#### 2. Weight

AR-D17	22.5kg (without paper weight)
AR-D18	29.5kg (without paper weight)
AR-D19	31.0kg (without paper weight)

#### 3. Dehumidifier heater

Option

#### 4. External dimensions

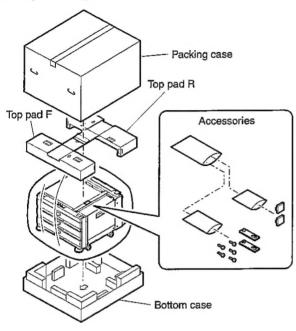

600.0 (W) × 642.0 (D) × 402.7 (H) [mm]

#### 5. Power consumption

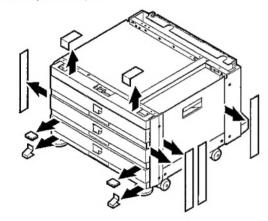

AR-D17	24V: 1.3A/31.2W 5V: 0.2A/1.0W (without heater)	
AR-D18	24V: 1.3A/31.2W 5V: 0.3A/1.5W (without heater)	
AR-D19	24V: 1.4A/313.6W 5V: 0.4A/2.0W (without heater)	

# 2] UNPACKING AND INSTALLATION

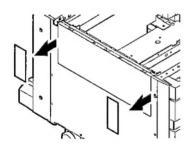

# I. Unpacking

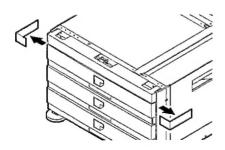

temove the protection pad.

R-D17/D18

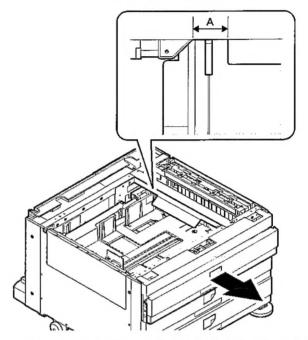

R-D19

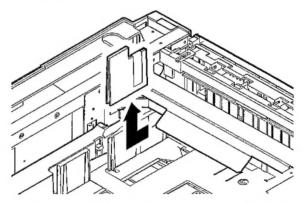

#### Remove the paper tray guide stoppers.

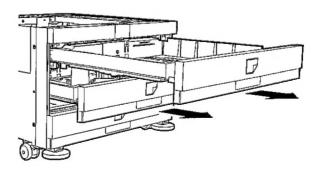

- Before placing the main unit, remove the paper tray lever stoppers.
   AR-D17: 1 stopper (No. 1 paper tray)
   AR-D18: 3 stoppers (No. 1, No. 2 and No. 3 paper trays)
   AR-D19: 2 stoppers (No. 2 and No. 3 paper trays)
- 2) Pull out the No. 1 paper tray in the direction of the arrow.
  - \* Pull out until the paper tray guide stopper comes between A.

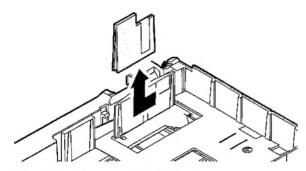

Pull out to remove the No. 1 paper tray guide stopper in the direction of the arrow.

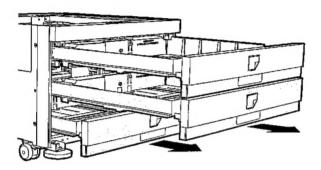

- Slowly pull out the No. 1 paper tray (the No. 1 ADU for AR-D19) until it stops.
- 5) Pull out the No. 2 paper tray a little bit.

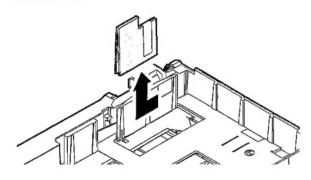

Pull out to remove the No. 2 paper tray guide stopper in the direction of the arrow.

7) Pull out the No. 2 paper tray until it stops.

- 8) Pull out the No. 3 paper tray a little bit.
- Pull out to remove the No. 3 paper tray guide stopper in the direction of the arrow.

#### 2. Installation

Before installation

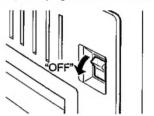

- Start installation after checking that the DATA indicator on the op ation panel is neither lit nor blinking.
- For installation of the stand/two paper drawers with a duplex mode (AR-D19), the duplex bypass/inverter unit (AR-RB1) is alwaneeded.

#### Parts included

		00	
	Connecting plate: 2 pcs.	Connecting plate cover: 2 pcs.	Connecting screw: 5 pcs.

#### (1) Turn off the main switch of the main unit.

- Turn the main switch located on the left side of the main unit to t "OFF" position.
- 2) Then remove the power plug of the main unit from the outlet.

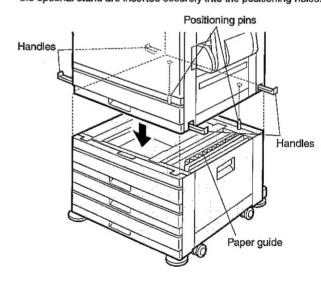

#### (2) Place the main unit on the optional stand. (Note: This work must be performed by two persons or more.)

- 1) Pull out the four handles on the right and left sides of the main un
- Place the main unit on the optional stand aligning the outside line (front side, right and left sides) of the main unit with those of the stand.

Note: At this time, be careful not to hit the paper guide or the ext rior of the optional stand with the four rubber feet of the ma unit.

 Ensure that the two positioning pins located on the top surface the optional stand are inserted securely into the positioning holes

#### Connect the main unit with the stand.

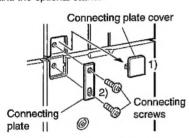

#### Connection of front side

- ) Pull out the paper tray of the main unit until it stops, and lift both ends of the paper tray to remove it.
- 2) Raise the connecting plate located on the front side of the optional stand as shown in the illustration and use a connecting screw to secure the main unit and the optional stand.

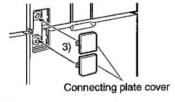

#### Connection of right side

- ) Remove the connecting plate cover located on the right side of the main unit.
- Use a connecting plate and two connecting screws to secure the main unit and the optional stand.

 Insert the connecting plate cover that has been removed in step 1) and a supplied connecting cover to the exteriors of the main unit and the optional stand respectively.

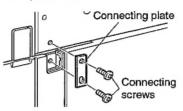

#### Connection of left side

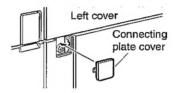

) Pull the lock release lever to pull out the left cover.

Use a connecting plate and two connecting screws to secure the main unit and the optional stand.

Close the left cover of the main unit securely and insert a supplied connecting plate cover into the exterior of the optional stand.

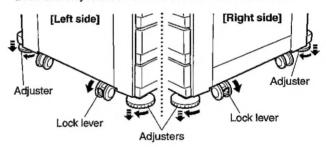

Note: Since the connecting screws have a function to connect electrically (earth) the main unit and the optional stand in addition to the function of securing the main unit and the stand, be sure to fix the screws securely.

 Reattach the paper tray that has been removed in the connection of front side to the main unit.

#### (4) Install the main unit.

- 1) Move the main unit to the installation location.
- Move the lock levers of the two casters located near the front side of the optional desk in the direction of the arrow to lock the casters.
- Turn the four adjusters of the optional stand in the direction of the arrow until they reach the floor to secure them on the floor.

(5) Remove the locking pin for packing from the paper drawer.

#### For AR-D17 and D18:

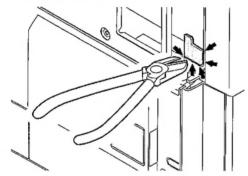

- Gently pull out the upper paper tray of the optional stand until it stops.
- Turn the locking pin for packing that secures the paper pressure plate from the paper tray in the direction of the arrow to remove it with the notice paper.
- 3) Gently close the paper tray.
- For the stand/three paper drawers (AR-D18), perform the same steps for the second and third paper trays.

#### For AR-D19:

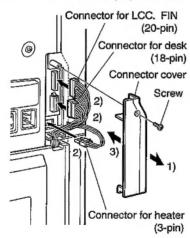

- Gently pull out the second paper tray of the optional stand until it stops.
- Turn the locking pin for packing that secures the paper pressure plate from the paper tray in the direction of the arrow to remove it with the notice paper.
- 3) Gently close the paper tray.
- Remove the locking pin for packing from the third paper tray similarly.

#### (6) Connect the connector of the stand.

- Remove the screw that secures the connector cover on the rear side of the main unit and then remove the connector cover.
- Connect the 20-pin connector and the 18-pin connector of the stand relay harness to the connectors of the main unit.
  - Then connect the connector for heater (3-pin).
- \* To install the connector of the desk dehumidifier heater (an option for some destinations), cut off the five points on the rear of the left cabinet of the machine with nippers. (The five points are shown with arrows in the figure below.)

Taking care not to get the harness caught, attach the connector cover that has been removed in step 1) with the screw.

- For installation of the duplex bypass/inverter unit, saddle finisher or large capacity tray, see the respective installation manual.
- \* If another peripheral device must be installed, carry out the following steps at the end of the installation work.

Insert the power plug of the main unit to the outlet and turn on the main switch.

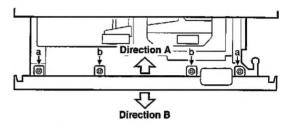

#### (7) Carry out the off center adjustment.

Since adjustment has been made at shipping, adjustment is normal not needed here. If the center should be, however, displaced, carry of the following steps to adjust.

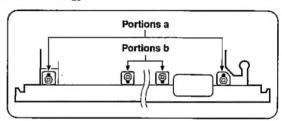

Make a copy. If the center of the copy is displaced as shown in Fig or Fig. 2, loosen the four screws shown below that secure the frocabinet of the paper tray and then carry out the following work.

#### [Note]

When securing the front cabinet, the clearance between the screw and the cabinet must be symmetrical at screw portions a and portio b respectively.

#### [Reference drawing]

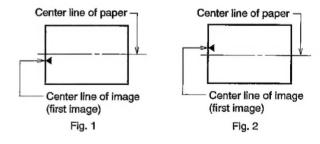

#### . In the case of Fig. 1

Move the front cabinet in direction A, tighten two screws a and to screws b in this order, and make a copy again to check that the cent is not displaced.

#### . In the case of Fig. 2

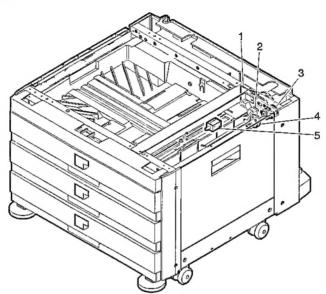

Move the front cabinet in direction B, tighten two screws a and tw screws b in this order, and make a copy again to check that the cent is not displaced.

# [3] INTERNAL STRUCTURE

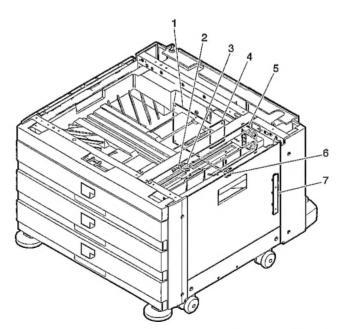

# 1. AR-D17

# A. Motors, clutches, solenoids

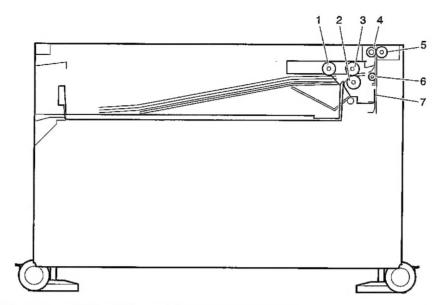

No.	Name	Code	Function/Operation	
1	Paper feed drive motor	DM	Drives the paper feed section and the paper transport section.	
2	Lift motor	DLM	Drives the lift plate.	
3	Transport clutch	DTRC	Controls ON/OFF of the transport roller.	
4	Paper feed clutch	DPFC	Controls ON/OFF of the paper feed roller.	
5	Pickup solenoid	DPFS	Presses the paper pickup roller onto paper.	

# 3. PWB, sensors

No.	Name	Code	Function/Operation
1	Desk control PWB		Controls and drives the desk and reverse control.
2	Paper empty sensor	DPED	Senses paper empty in the paper tray.
3	Paper upper limit sensor	DLUD	Senses the upper limit of paper.
4	PC interface PWB		Relays the software writing signals.
5	Lifter PWB		Relays the paper size detection, the paper remain detection and each loads to the paper tray units.
6	Paper transport sensor 1	DPPD1	Senses the paper transport.
7	PFD PWB		Senses the paper transport 2, 3 and the door.

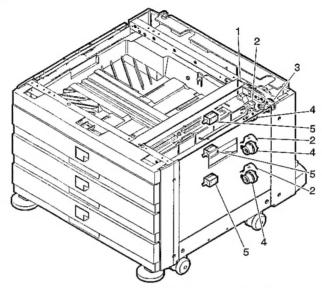

#### C. Cross sectional view

No.	Name	Function/Operation	
1	Paper pickup roller	Picks up and transports paper from the paper tray.	
2	Separation roller	Separates and transports paper in the paper tray.	
3	Paper feed roller	Transports paper in the paper tray.	7,
4	Vertical transport roller upper	Transports paper from the desk to the main unit.	
5	Idle roller	Presses the vertical transport roller upper onto paper.	
6	Idle roller	Reduces the paper pickup load on the vertical transport roller upper.	
7	Paper tray paper feed unit	Picks up and separates and transports paper in the paper tray.	<u> </u>

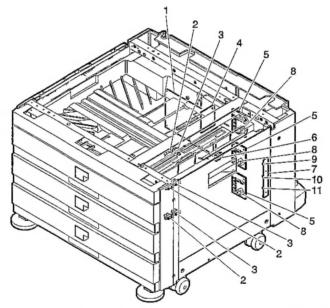

# 2. AR-D18

# A. Motors, clutches, solenoids

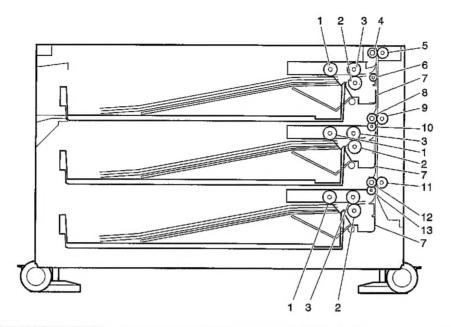

No.	Name	Code	Function/Operation	
1	Paper feed drive motor	DM	Drives the paper feed section and the paper transport sec	ction.
2	Lift motor	DLM	Drives the lift plate.	
3	Transport clutch	DTRC	Controls ON/OF of the transport roller.	
4	Paper feed clutch	DPFC	Controls ON/OFF of the paper feed roller.	
5	Pickup solenoid	DPFS	Presses the paper pickup roller onto paper.	

# B. PWB, sensors

No.	Name	Code	Function/Operation
1	Desk control PWB		Controls and drives the desk and reverse control.
2	Paper empty sensor	DPED	Senses paper empty in the paper tray.
3	Paper upper limit sensor	DLUD	Senses the upper limit of paper.
4	PC interface PWB		Relays the software writing signals.
5	Lifter PWB		Relays the paper size detection, the paper remain detection and each loads to the paper tray units.
6	Paper transport sensor 1	DPPD1	Senses the paper transport.
7	PFD PWB		Senses the paper transport 2, 3 and the door.
8	Remaining paper quantity sensor	DCSPS	Senses the remaining paper quantity.
9	Paper transport sensor 2	DPPD2	Senses the paper transport.
10	Door open/close sensor	DDOPD	Senses the door open/close.
11	Paper transport sensor 3	DPPD3	Senses the paper transport.

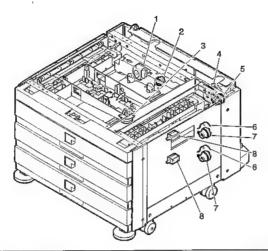

#### C. Cross sectional view

No.	Name	Function/Operation
1	Paper pickup roller	Picks up and transports paper from the paper tray.
2	Separation roller	Separates and transports paper in the paper tray.
3	Paper feed roller	Transports paper in the paper tray.
4	Vertical transport roller upper	Transports paper from the desk to the main unit.
5	Idle roller	Presses the vertical transport roller upper onto paper.
6	Idle roller	Reduces the paper pickup load on the vertical transport roller upper.
7	Paper tray paper feed unit	Picks up and separates and transports paper in the paper tray.
8	Vertical transport roller	Transports paper.
9	ldle roller	Presses the vertical transport roller onto paper.
10	ldie roller	Reduces the paper pickup load on the vertical transport roller.
11	Idie roller	Presses the vertical transport roller onto paper.
12	Vertical transport roller	Transports paper.
13	Idle roller	Reduces the paper pickup load on the vertical transport roller.

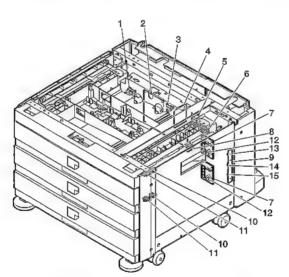

# 3. AR-D19

# A. Motors, clutches, solenoids

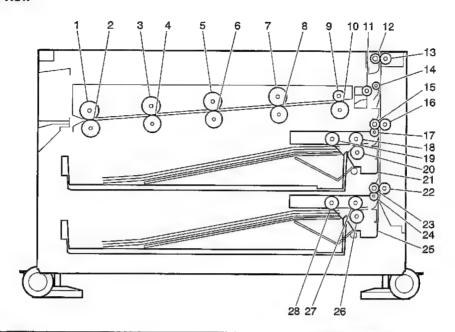

No.	Name	Code	Function/Operation					
1	ADU transport motor	ATM	Drives the paper transport section in ADU.					
2	ADU transport clutch	ATRC	Controls ON/OFF of the transport roller in ADU.					
3	Alignment motor	APAM	Aligns the paper in ADU.					
4	Paper feed drive motor	DM	Drives the paper feed section and the paper transport section.					
5	Transport clutch	DTRC	Controls ON/OFF of the transport roller.					
6	Lift motor	DLM	Drives the lift plate.					
7	Paper feed clutch	DPFC	Controls ON/OFF of the paper feed roller.					
8	Pickun solenoid	DPFS	Presses the paper pickup roller onto paper.					

# B. PWB, sensors, switches

			Fire skips (Operation
No.	Name	Code	Function/Operation
1	ADU transport sensor 1	APPD1	Senses paper transport in ADU.
2	Desk control PWB		Controls and drives the desk and reverse control.
3	Alignment plate home position sensor	APHPS	Senses the alignment plate in ADU.
4	PC interface PWB		Relays the software writing signals.
5	ADU transport sensor 2	APPD2	Senses paper transport in ADU.
6	ADU interface PWB		Relays the loads in ADU.
7	Lifter PWB		Relays paper size detection, remaining paper quantity detection and each loads on the paper feed unit.
8	Paper transport sensor 1	DPPD1	Senses paper transport.
9	PFD PWB		Controls the transport sensor 2, 3 and the door detection.
10	Paper upper limit sensor	DLUD	Senses the upper limit of paper.
11	Paper empty sensor	DPED	Senses paper empty in the paper tray.
12	Paper remaining paper quantity sensor	DCSPS	Senses the remaining paper quantity.
13	Paper transport sensor 2	DPPD2	Seenses paper transport.
14	Door open/close sensor	DDOPD	Senses the right door open/close.
15	Paper transport sensor 3	DPPD3	Senses paper transport.

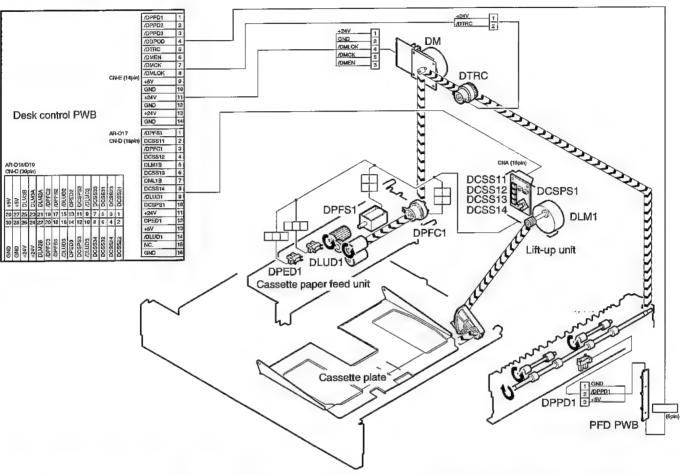

#### C. Cross sectional view

No.	Name	Function/Operation
1	Idle roller	Presses the ADU roller 1 onto paper.
2	ADU roller 1	Transports paper from the reverse unit.
3	Idle roller	Presses the ADU roller 2 onto paper.
4	ADU roller 2	Transports paper,
5	Idle roller	Presses the ADU roller 3 onto paper.
6	ADU roller 3	Transports paper.
7	Idle roller	Presses the ADU roller 4 onto paper.
8	ADU roller 4	Transports paper.
9	ldle roller	Presses the ADU roller 5 onto paper.
10	ADU roller 5	Aligns paper then transports paper from ADU to the desk.
11	Idle roller	Reduces the paper transport loads.
12	Vertical transport roller upper	Transports paper from the desk to the main unit.
13	Idle roller	Presses the transport roller upper onto paper.
14	Idle roller	Reduces the paper pickup load on the vertical transport roller upper.
15	Vertical transport roller	Transports paper.
16	Idie roller	Presses the transport roller onto paper.
17	Idle roller	Reduces the paper pickup load on the vertical transport roller.
18	Paper feed roller	Transports paper in the paper tray.
19	Paper pickup roller	Picks up to transport paper in the paper tray.
20	Separation roller	Separates to transport paper in the paper tray.
21	Paper tray paper feed unit	Picks up and separates and transports paper in the paper tray.
22	Idle roller	Presses the vertical transport roller onto paper.
23	Vertical transport roller	Transport paper.
24	Idle roller	Reduces the paper pickup load on the vertical transport roller.
25	Paper tray paper feed unit	Picks up and separates and transports paper in the paper tray.
26	Separation roller	Separates and transports paper in the paper tray.
27	Paper feed roller	Transports paper in the paper tray.
28	Paper pickup roller	Picks up and transports paper in the paper tray.

# [4] MACHINE OPERATIONS

#### 1. Cassette operation

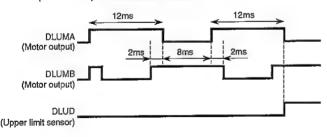

- When a cassette is inserted, DLM1 (lift-up motor) rotates to lift up the cassette plate.
- If the tray is ready to feed paper (DLUD1 is ON and DPED is ON), after reception of the JOB start, paper is fed to DPPD1 by the desk motor (DM), the transport clutch (DTRC), the paper feed clutch (DPFC1), the pickup solenoid (DPFS1), and the cassette paper feed unit.

#### A. Lift operation

When a cassette is inserted, the lift-up motor is turned on to lift the rotating plate, and is stopped at the paper feed position. (Upper limit sensor: ON position of DLUD)

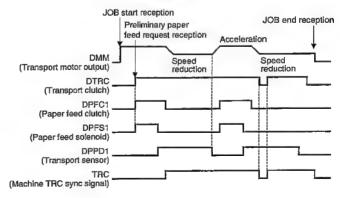

The lift-up motor output is as shown below:

#### B. Paper feed operation

If the tray is in the paper feed ready position (upper limit sensor: at ON position of DLUD) and there is some paper in the tray, paper feed can be performed.

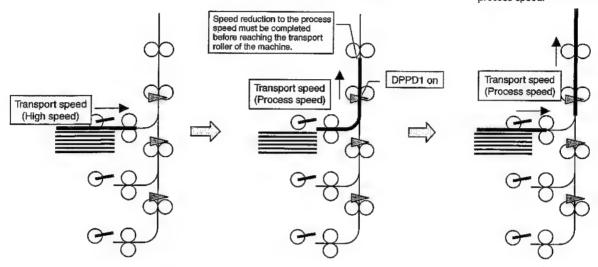

Paper feed is performed by the transport motor (DM), the transport clutch (DTRC), and paper feed clutch (DPFC), and the paper feed solenoid (DPFS) at the following timing.

#### 2. Desk operation

#### A. Paper feed from the upper-stage cassette

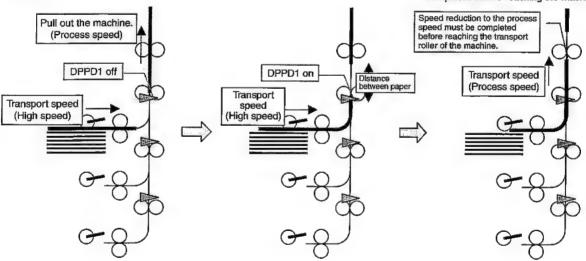

- The first paper feed starts.
   Transports paper at a high speed.
- When the transport sensor (DPPD1) is on, the transport speed is reduced to the process speed before reaching the transport roller of the machine.
- 3) The second paper feed starts. As the first paper still stays between the desk and the machine, the second paper is transported at the process speed.

- When the transport sensor (DPPD1) is off, the transport motor speed is accelerated to transport the second paper at a high speed.
- When the transport sensor (DPPD1) is on, the distance from the previous paper is sensed.

THE HAR CHIEF HERE HERE FOR THE PROPERTY OF THE PERSON HAR BEFORE THE

6) The timing of reducing speed is varied according to the distance from the previous paper to adjust the distance. However, speed reduction must be completed before reaching the machine roller.

Repeat 3) to 6).

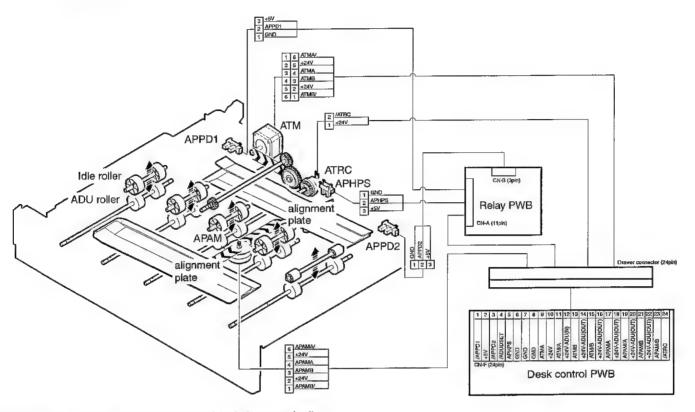

# B. paper feed from the mid-stage cassette or the lower-stage cassette

Similarly in paper feed from the mid-stage cassette or the lower-stage cassette, the transport motor speed is accelerated when the transport sensor (DPPD1) is off, and the transport motor speed is reduced in the proper timing when the DPPD1 is on with the next paper.

#### C. Paper empty detection

When the rotating late moves up and stops at the paper feed ready position and in the paper feed operation, paper empty in the tray is detected by the paper empty sensor (DPED).

#### 3. ADU operation

During duplex operation, after one side is finished, the paper is discharged from the fuser unit and, due to the switching of the gate, sent through the decurler unit (AR-RB1) and transported to the ADU unit.

The paper is reversed by the reverse roller in PB1 and aligned in the ADU, and transported to the transport section for copying on the second side.

#### A. Initial operation

When the machine power is turned on, or when the ADU is detached, the alignment plate of the ADU is initialized (moved to the home position).

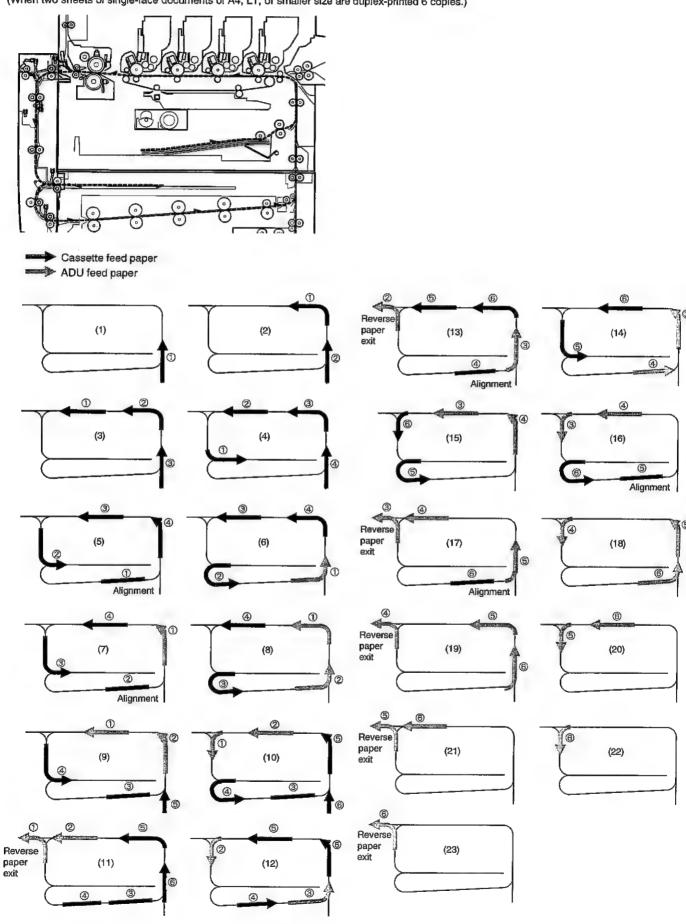

When initialization is made with the home position sensor at the OFF state, the alignment motor is rotated to the home position at initializing start. When the home position sensor is turned on, the alignment motor is stopped to terminate initialization.

When initialization is made with the home position sensor at the ON state, the alignment motor is rotated in the regulating direction at initializing start, and the motor is stopped with the home position sensor at the OFF state.

Then the alignment motor is rotated to the home position. When the home position sensor is turned on, it is stopped to terminate initialization.

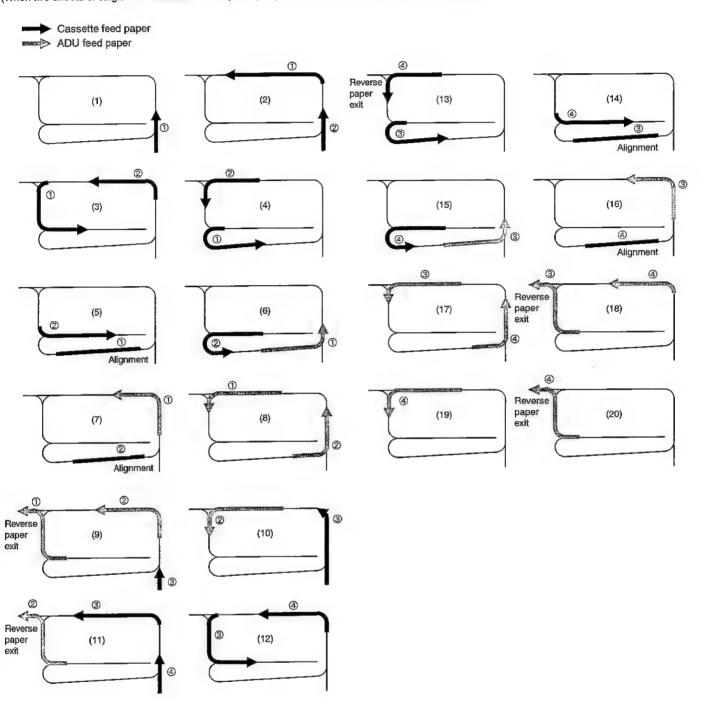

#### B. Paper feed operation

(When two sheets of single-face documents of A4, LT, or smaller size are duplex-printed 6 copies.)

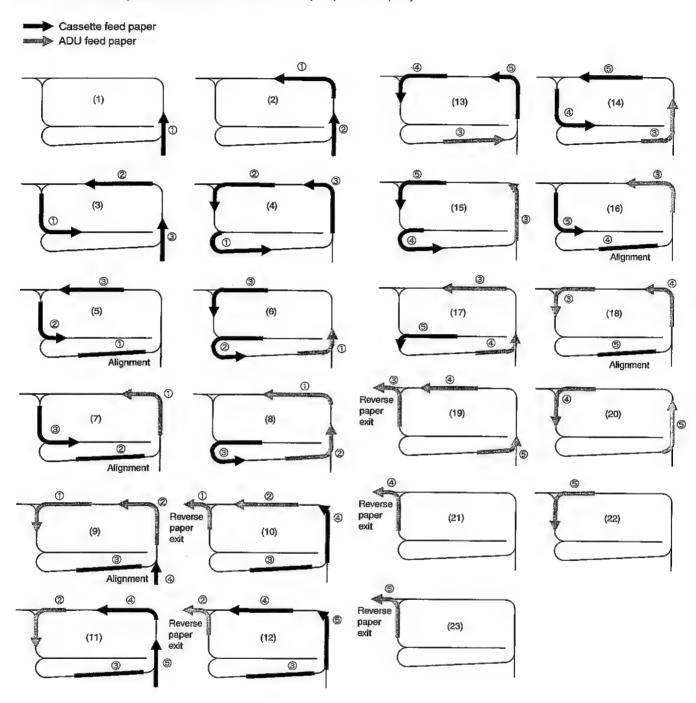

AR-D17/D18/D19 MACHINE OPERATIONS 4-4

(When two sheets of single-face documents of A3, WLT, 8K, or EXTRA size are duplex-printed 4 copies.)

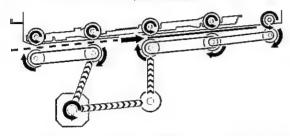

(When two sheets of single-face documents of other size are duplex-printed 5 copies.)

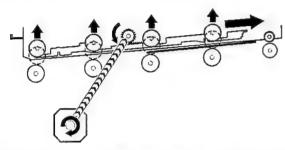

# 4. ADU pressure release and alignment operations

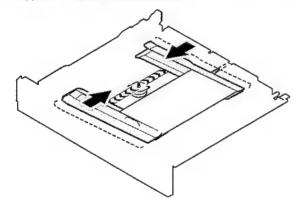

The paper is passed to the ADU and transported to the alignment position as shown below by driving the ATM (ADU transport motor) in the forward direction with the ATRC (ADU transport clutch) ON.

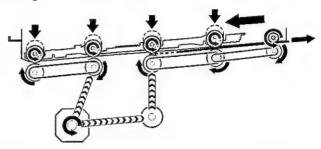

The ATM (ADU transport motor) is rotated in the reverse direction to drive the pressure release slide arm in the arrow direction in the figure below and to lift the four follower rollers, releasing the roller pressure from the paper.

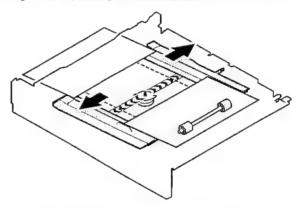

By rotating the APAM (alignment motor), the alignment guide F and the alignment guide R are simultaneously rotated in the arrow direction and stopped at the paper width positions.

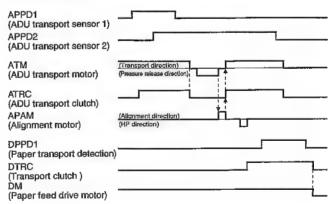

After completion of alignment operation, the ATM (ADU alignment motor) is rotated in the forward direction, and the pressure release slide arm is driven in the arrow direction shown in the figure below to apply a roller pressure on paper. Then the paper is transported and discharged from the ADU.

When the paper lead edge passes the ADU roller, the APAM (alignment motor) is rotated and the alignment guide F and the alignment guide R are simultaneously driven to the outside (in the arrow direction in the figure below), waiting for the next paper to be transported.

The figure below shows the timing of each sensor input, motor output, and clutch output.

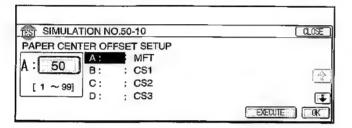

# [5] ADJUSTMENTS

# (1) Print off-center adjustment

 Perform the following key operations of the machine to enter the print off-center adjustment mode (SIM 50-10).

In SIM 50-10, the following display is shown. The print off-center adjustment value is set for each paper feed tray.

 Select [G]: ADU with [↑] and [↓] keys, and change the set value of the print off-center with the 10-key.

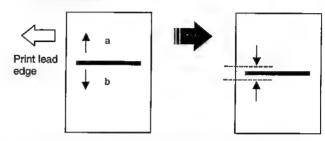

Item	Display item	Item description	Set range	Initial value
Α	MFT	Print off-center adjustment value (manual feed)	1 – 99	50
В	CS1	Print off-center adjustment value (1st cassette)	1 – 99	50
С	CS2	Print off-center adjustment value (2nd cassette)	1 – 99	50
D	CS3	Print off-center adjustment value (3rd cassette)	1 – 99	50
E	C\$4	Print off-center adjustment value (4th cassette)	1 – 99	50
F	LCC	Print off-center adjustment value (LCC)	1 – 99	50
G	ADU	Print off-center adjustment value (ADU)	1 – 99	50
Н	MULTI COUNT	Print quantity	1 – 999	1
ı	PAPER	Paper feed tray selection (MFT, CS1, CS2, CS3, CS4, LCC)	1-6	2 (CS1)
J	EXIT TRAY	Paper exit tray selection (R, S)	1 or 2	1
К	DUPLEX	Duplex print selection (NO, YES)	1 or 2	1

- When the adjustment value of A G is decreased by 1, the main scan print position is shifted to the front side by 0.1mm.
- When the adjustment value of A G is increased by 1, the main scan print position is shifted to the rear side by 0.1mm.
   (Example) When 45 is set:

- Select "[i]: Paper feed tray selection" with [1] and [4] keys on the LCD panel, and select the paper feed tray with the 10-key.
- Select "[K]: Duplex print selection" with [↑] and [↓] keys on the LCD panel, and select "Duplex print (YES)" with [2] key.
- 6) When [EXECUTE] on the LCD panel is pressed, a sheet of paper is fed from the selected paper feed tray, and is transported to the ADU, performing duplex print.
  - During paper transistor, [EXECUTE] is highlighted.
- When self-print operation is completed, the machine is stopped and [EXECUTE] returned to the normal display.

 Check the self print output, and repeat procedures 3 – 7 until th value is in the range of 0 ± 1.5mm.

When the value is in the above range, press [CA] to cancel th simulation mode.

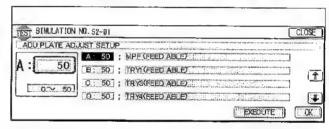

# (2) Alignment plate check and adjustment

 Perform the following key operations of the machine to enter the alignment plate adjustment mode (SIM 52-01).

 In SIM 52-01, the following display is shown, and the alignmen plate adjustment value can be set for each paper feed tray.

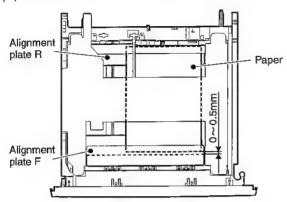

Select the paper feed tray with [↑] and [↓] keys on the LCD panel.

Item	ltem	Set range
Α	Intermediate tray alignment plate adjustment (Manual feed)	0 - 99
В	Intermediate tray alignment plate adjustment (1st cassette)	0 - 99
С	Intermediate tray alignment plate adjustment (3rd cassette)	0-99
D	Intermediate tray alignment plate adjustment (4th cassette)	0 – 99
E	Intermediate tray alignment plate adjustment (LCC)	0 – 99

- 4) When [EXECUTE] on the LCD panel is pressed, a sheet of paper is fed from the selected paper feed tray and transported to the alignment section in the ADU unit.
  - During paper transport, [EXECUTE] is highlighted.
- 5) When paper is transported to the alignment section and alignment is completed, the machine is stopped and [EXECUTE] returns to the normal display. Then pull out the ADU unit.

6) Move the paper to the rear side of the alignment plate, and check that the clearance between the alignment plate (F side) and the paper is 0 – 0.5mm.

 When the clearance between the alignment plate and the paper is in 0 – 0.5mm;

Remove the paper in the ADU unit. Press [CA] key to cancel the simulation mode.

- When the clearance between the alignment plate and the paper is out of 0 – 0.5mm:
  - Remain the paper in the ADU unit, and insert the ADU unit and change the set value.

(Example) When 45 is set:

Reference for set value

The relationship between the set value and the alignment plate width is as shown below:

Set value	Alignment plate width
Decreased by 1	Widened by about 0.3mm
Increased by 1	Narrowed by about 0.3mm

- However, when performing an adjustment for a paper feed tray set at A4R/A5/B5R, pull out the ADU unit and check the clearance and be sure to remove the paper. (Every time when the set value is changed, a sheet of paper is fed from the paper feed tray.)
- When [EXECUTE] on the LCD panel is pressed, alignment is performed with the set value. During alignment operation, [EXE-CUTE] is highlighted.
- When alignment operation is completed, [EXECUTE] returns to the normal display. Pull out the ADU unit again and check the clearance between the alignment plate and the paper. (When checking, be sure to move the paper to the rear end of the alignment plate.)
  - If the clearance is out of  $0-0.5 \mathrm{mm}$ , repeat procedures 1-3 to adjust. Enter the same set value for other paper feed trays.
- After completion of the adjustment, remove paper from the ADU unit, and press [CA] key to cancel the simulating mode.

Paper feed rollers: 100K or 2 years

AR-D17/D18/D19 DISASSEMBLY, ASSEMBLY, AND MAINTENANCE 6 - 1

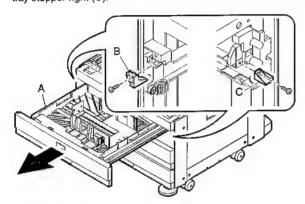

# 2. Disassembly and assembly

#### A. Paper feed separation section

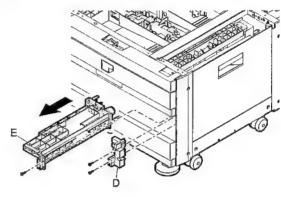

Pa	rt name	Call	50K	100K	150K	200K	250K	300K	350K	400K	Remark
Paper feed	Paper feed rollers	(O) X	0	×	0	×	0	×	0	×	
separation section	Earth spring	×		×		×		×		×	
	Torque limiter	(O) X		×		×		×		×	

#### (1) Paper feed rollers

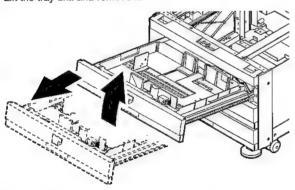

- 1) Pull out the tray unit (A).
- 2) Remove the screw, and remove the tray stoppers left (B) and the tray stopper right (C).

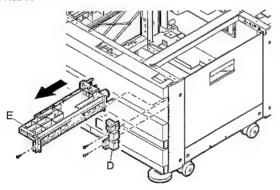

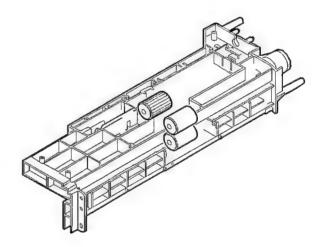

- 4) Remove the screw and remove the tray rail R (D).
- 5) Remove the screw and remove the paper feed unit (E).

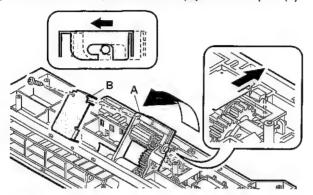

#### AR-D17/D18

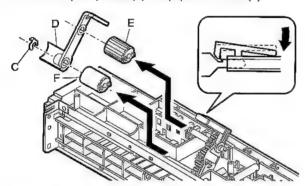

#### a. Paper pickup roller and paper feed roller removal

- 1) Remove the paper feed unit.
- 2) Disengage the pawl, and lift the pickup roller lever (A).
- 3) Remove the screw, and remove the paper feed wait plate (B).

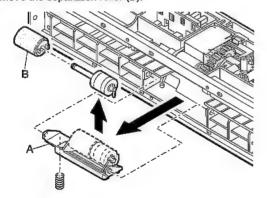

- 4) Remove the stopper (C).
- 5) Disengage the pawl, and remove the pickup roller lever L (D).
- 6) Remove the pickup roller (E) and paper feed roller (F).

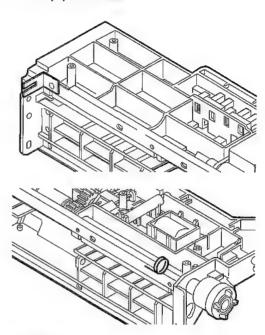

#### b. Separation roller removal

- 1) Remove the paper feed unit.
- 2) Remove the separation roller unit (A).
- 3) Remove the separation roller (B).

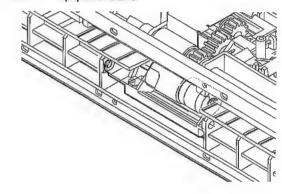

#### (2) Earth spring

1) Remove the paper feed unit.

#### (3) Torque limiter

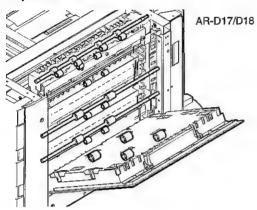

1) Remove the paper feed unit.

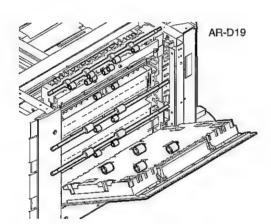

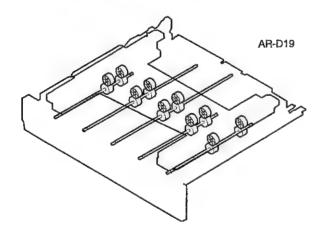

#### **B.** Transport section

Pa	irt name	Call	50K	100K	150K	200K	250K	300K	350K	400K	Remark

#### (1) Transport rollers/Rollers

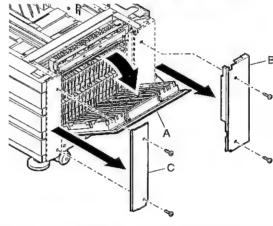

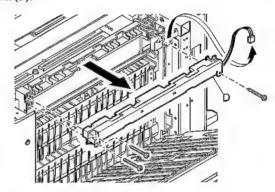

#### a. Vertical transport roller upper removal

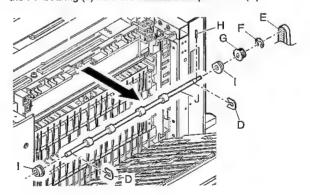

- 1) Open the right door unit (A).
- 2) Remove the screw, and remove the right cabinet rear (B).
- 3) Remove the screw, and remove the right cabinet front (C).

- 4) Disconnect the connectors.
- Remove the screws, and remove the transport paper guide upper unit (D).

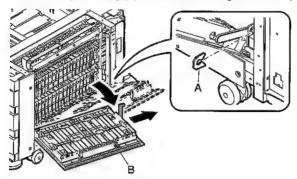

- 6) Remove the nylon C-ring (E).
- Remove the vertical transport roller unit and remove the upper transport belt (F).
- 8) Remove the E-ring (G), the drive pulley (H), the parallel pin (I), and the PF bearing (J) from the vertical transport roller (K).

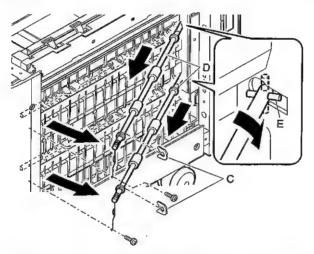

#### b. Vertical transport rollers 1 and 2 removal

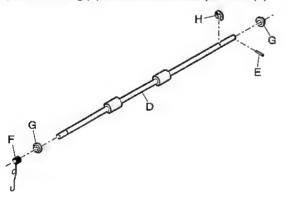

- Remove the right cabinet rear. (Refer to the vertical transport roller upper.)
- 2) Remove the nylon C-ring (A), and remove the right door unit (B).

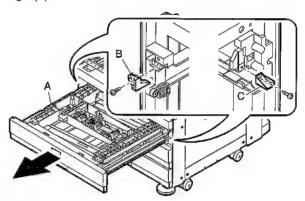

- 3) Remove the screw.
- 4) Remove the nylon C-ring (C) and the vertical transport roller (D).
- \* when removing the vertical transport roller (D), remove it from the front side and rotate it to put the spring pin (E) horizontally and remove it.

 Remove the spring pin (E), the earth spring (F), the PF bearing (G), and the E-ring (H) from the vertical transport roller (D).

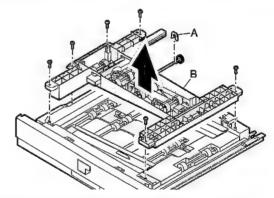

- c. ADU unit removal (AR-D19 only)
- 1) Remove the ADU unit (A).
- Remove the screw, the tray stopper left (B), and the tray stopper right (C).

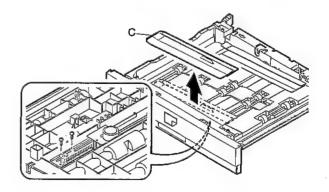

3) Lift the ADU unit and remove it.

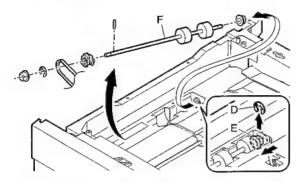

- d. ADU roller 1 removal (AR-D19 only)
- 1) Remove the ADU unit. (Refer to the ADU unit removal.)
- Remove the nylon C-ring (A), the screw, and the pressure release unit (B).

3) Remove the screw and remove the alignment guide F (C).

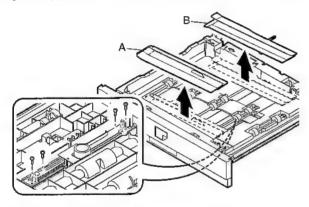

- Remove the E-ring (D) and shift the bearing (E).
- Remove the bearing, the E-ring, the belt, the pulley, and the pin from the ADU roller 1 (F).

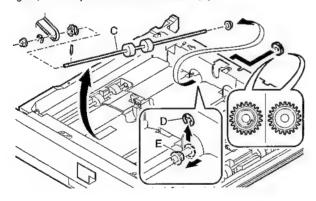

#### e. ADU roller 2 removal (AR-D19 only)

- 1) Remove the ADU unit. (Refer to the ADU unit removal.)
  - ) Remove the pressure release unit. (Refer to the ADU roller 1 removal.)
- Remove the screw, the alignment guide F (A), and the alignment guide R (B).

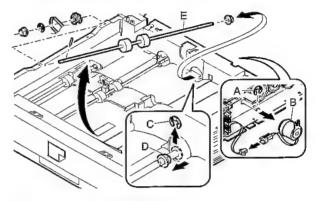

- 4) Remove the E-ring (D) and shift the bearing (E).
- Remove the bearing, the E-ring, the belt, the pulley, the one-way gear, and the pin from the ADU roller 2 (C).

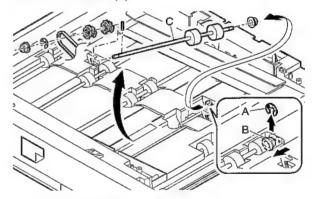

#### f. ADU roller 3 removal (AR-D19 only)

- 1) Remove the ADU unit. (Refer to the ADU unit removal.)
- Remove the pressure release unit. (Refer to the ADU roller 1 removal.)
- Remove the alignment guide F and the alignment guide R. (Refer to the ADU roller 2 removal.)
- Remove the connector and the E-ring (A), and remove the MPF paper feed clutch (B).
- 5) Remove the E-ring (C) and shift the bearing (D).
- Remove the bearing, the E-ring, the belt, the pulley, and the pin from the ADU roller 3 (E).

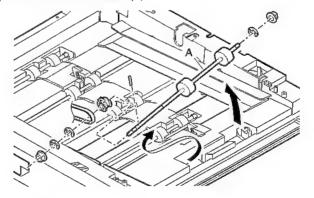

#### g. ADU roller 4 removal (AR-D19 only)

- 1) Remove the ADU unit. (Refer to the ADU unit removal.)
- Remove the pressure release unit and the alignment guide F. (Refer to the ADU roller 1 removal and the ADU roller 2 removal.)
- 3) Remove the E-ring (A) and shift the bearing (B).
- Remove the bearing, the E-ring, the belt, the pulley and the pin from the ADU roller 4 (C).

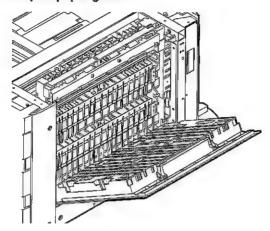

#### h. ADU roller 5 removal (AR-D19 only)

- 1) Remove the ADU unit. (Refer to the ADU unit removal.)
- Remove the pressure release unit and the alignment guide F. (Refer to the ADU roller 1 removal and the ADU roller 2 removal.)
- Remove the E-ring, the bearing, the belt, the pulley and the pin.
- 4) Remove the ADU roller 5 (A).

#### (2) Transport paper guides

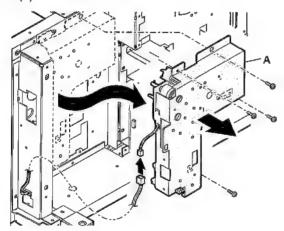

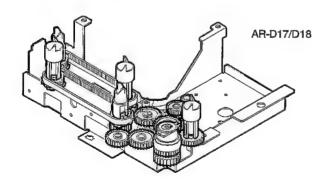

#### C. Drive section

	Part name	Call	50K	100K	150K	200K	250K	300K	350K	400K	Remark
Drive section	Desk gears	×		×		×		×		×	(Specified position)
	ADU gears	×		×		×		×		×	(Specified position)
	Belts	×						×			

#### (1) Desk gears

- 1) Pull out the cassette.
- Remove the power cover, the rear cabinet, and the right rear cabinet
- 3) Remove the paper feed drive motor.
- Remove the connector and the screw first. Then remove the drive unit (A).

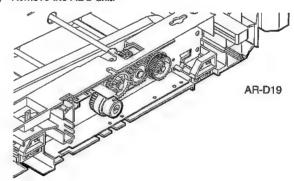

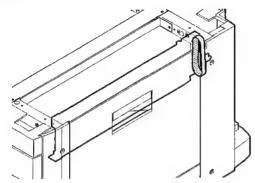

#### (2) ADU gears

1) Remove the ADU unit.

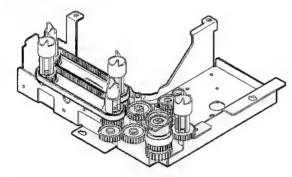

# (3) Belts

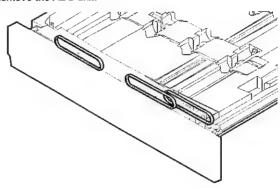

#### a. Drive unit

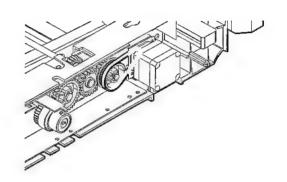

1) Remove the drive unit.

#### b. ADU unit

1) Remove the ADU unit.

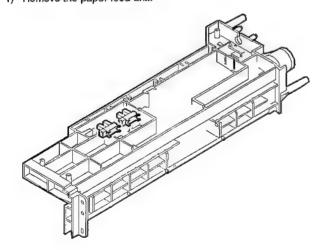

# D. Others

Part name		Call	50K	100K	150K	200K	250K	300K	350K	400K	Remark
Others	Sensors	×		×		×		×		×	

#### (1) Sensors

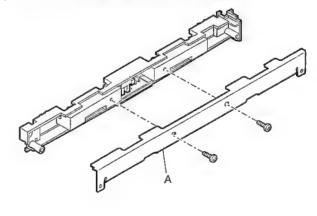

#### a. Paper feed unit

1) Remove the paper feed unit.

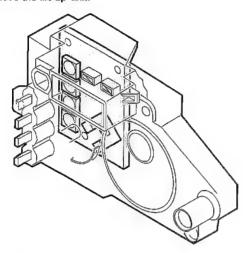

#### b. Transport paper guide upper unit

- 1) Remove the transport paper guide upper unit.
- 2) Remove the screw, and remove the metal plate (A).

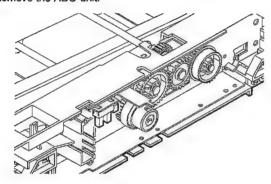

#### c. Lift-up unit

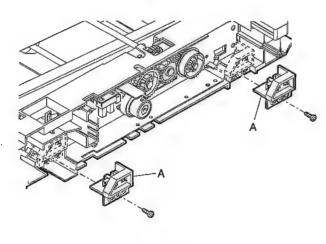

1) Remove the lift-up unit.

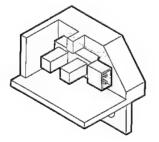

#### d. ADU unit

1) Remove the ADU unit.

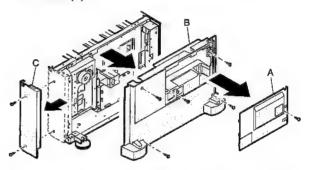

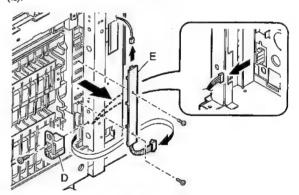

#### E. Major parts

#### (1) PFD PWB removal

- Remove the right cabinet rear. (Refer to the vertical transport roller upper removal.)
- Remove the right door unit. (Refer to the vertical transport rollers 1 and 2 removal.)
- 3) Remove the screw, and remove the power cover (A).
- Remove the screw, and remove the rear cabinet (B) and the right rear cabinet (C).

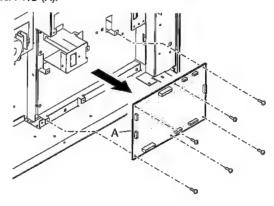

- 5) Remove the screw, and remove the right door fulcrum holder (D).
- Remove the connectors and screws and remove the PFD PWB (E).

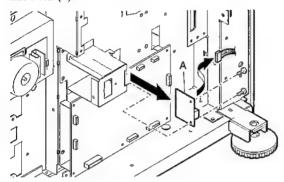

#### (2) Desk control PWB removal

- Remove the power cover and the rear cabinet. (Refer to the PFD PWB removal.)
- Remove the connector and the screw, and remove the desk control PWB (A).

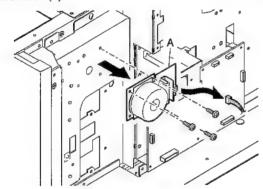

#### (3) PC interface PWB removal

- Remove the power cover and the rear cabinet. (Refer to the PFD PWB removal.)
- Remove the connector and the screw, and remove the PC interface PWB (A).

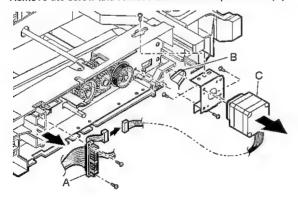

#### (4) Paper feed drive motor removal

- Remove the power cover and the rear cabinet. (Refer to the PFD PWB removal.)
- Remove the connector and the screw, and remove the paper feed drive motor (A).

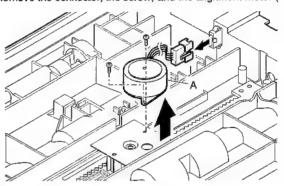

#### (5) ADU transport motor removal (AR-D19 only)

- 1) Remove the ADU unit. (Refer to the ADU unit removal.)
- 2) Remove the screw, and remove the connector (A).
- 3) Disconnect the ADU transport motor connector from the connector
- Remove the screw and remove the belt (B) and remove the ADU transport motor unit (B, C).
- 5) Remove the screw and remove the ADU transport motor (C).

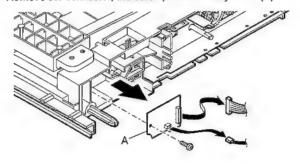

#### (6) Alignment motor removal (AR-D19 only)

- 1) Remove the ADU unit. (Refer to the ADU unit removal.)
- 2) Remove the connector, the screw, and the alignment motor (A).

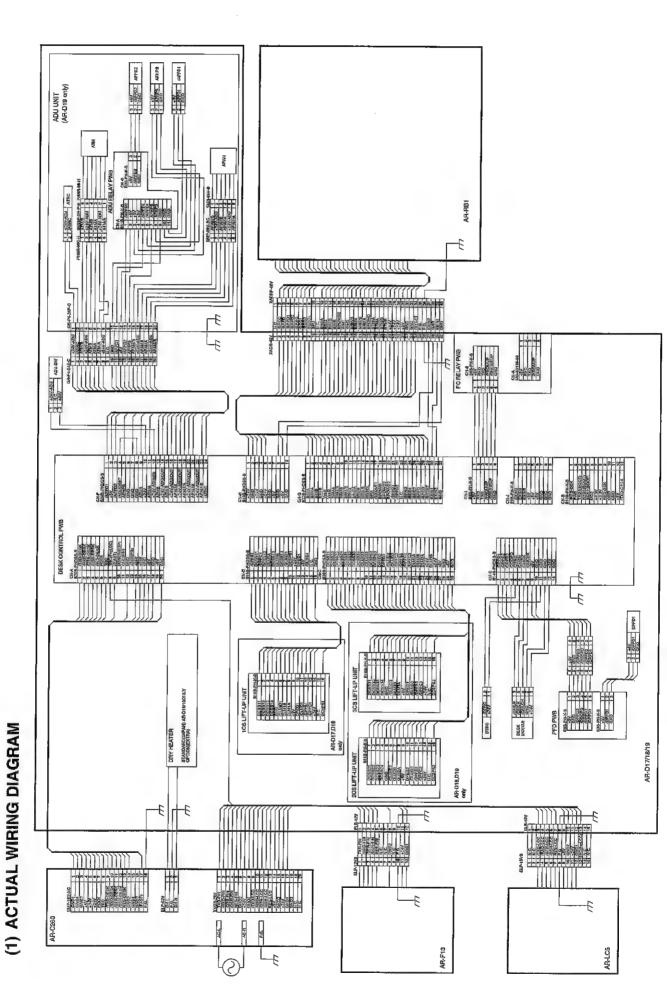

#### (7) Relay PWB removal (AR-D19 only)

- 1) Remove the ADU unit. (Refer to the ADU unit removal.)
- 2) Remove the connector, the screw, and the relay PWB (A).

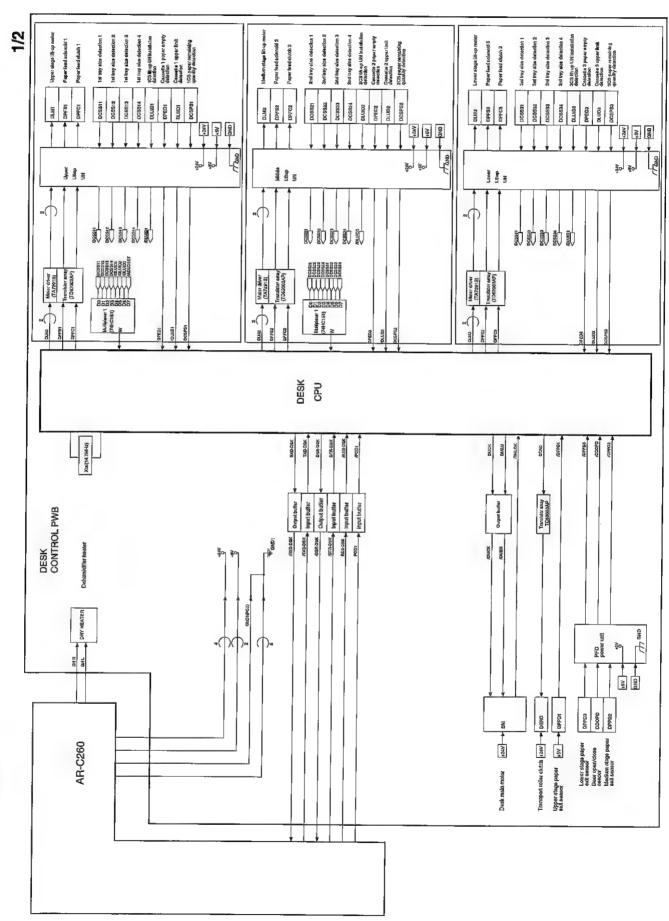

# [7] ELECTRICAL SECTION

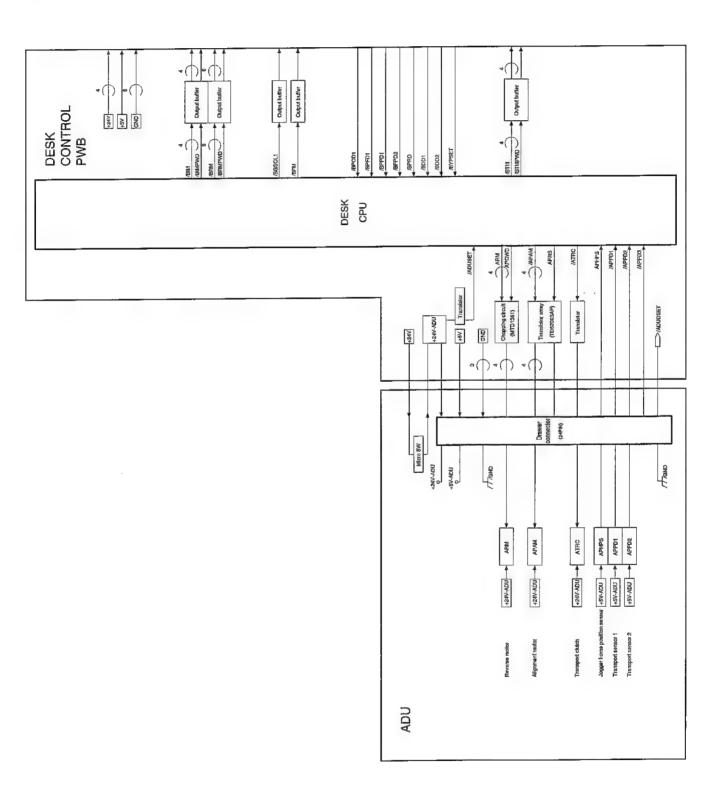

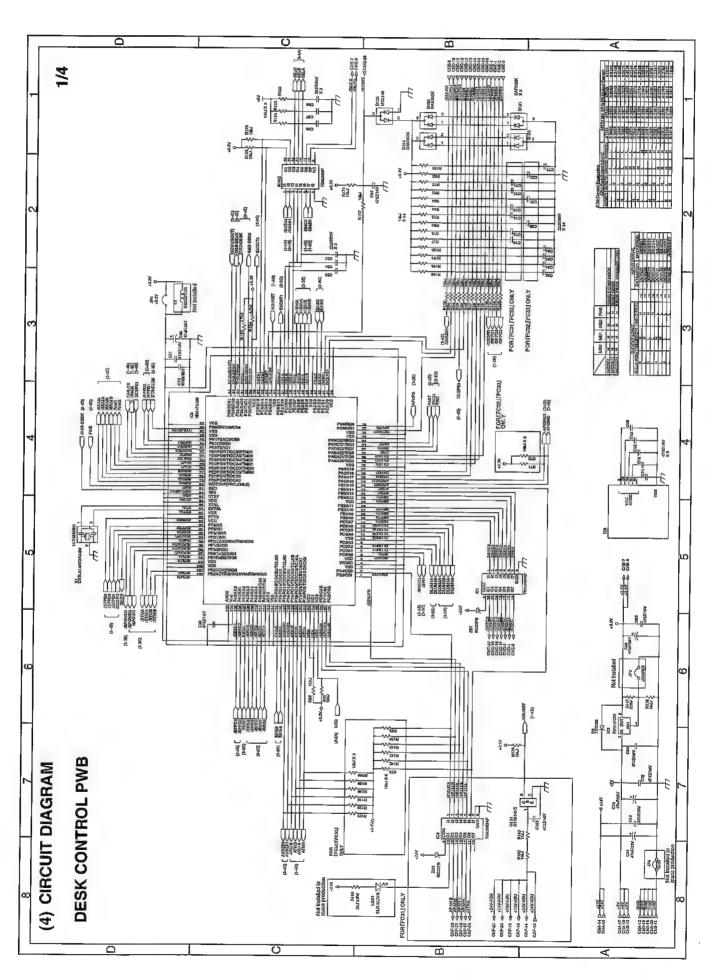

AR-D17/D18/D19 ELECTRICAL SECTION 7 - 1

# (2) Signal list

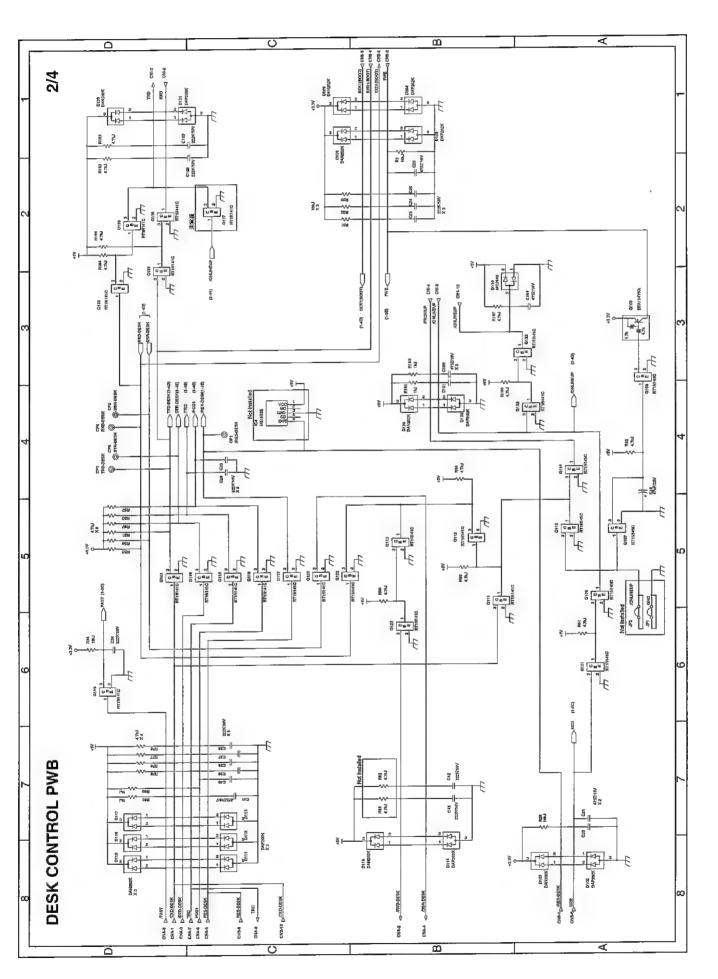

SIGNAL NAME	NAME	Function/Operation	Section
APAM	Alignment motor	Aligns paper in ADU.	AR-D19
APHPS	Alignment plate home position detection	Detects the alignment plate in ADU.	AR-D19
APPD1	ADU transport sensor 1	Detects paper transport in ADU.	AR-D19
APPD2	ADU transport sensor 2	Detects paper transport in ADU.	AR-D19
ATM	ADU transport motor	Drives the paper transport section in ADU.	AR-D19
ATRC	ADU transport clutch	Controls ON/OFF of the transport roller in ADU.	AR-D19
DCSPSx	Paper remaining quantity sensor	Detects the remaining quantity of paper.	AR-D17/D18
DCSSx	Paper size sensor	Detects the paper size.	AR-D17/D18/D19
DDOPD	Door open sensor	Detects opening of the right door.	AR-D17/D18
DLMx	Lift motor	Drives the lift plate.	AR-D17/D18/D19
DLUDx	Paper upper limit sensor	Detects the paper upper limit position.	AR-D17/D18/D19
DM	Paper feed drive motor	Drives the paper feed section and the paper transport section.	AR-D17/D18/D19
DPEDx	Paper empty sensor	Detects paper presence on the paper tray.	AR-D17/D18/D19
DPFCx	Paper feed clutch	Controls ON/OFF of the paper feed roller.	AR-D17/D18/D19
DPFSx	Pickup solenoid	Presses the paper pickup roller onto paper.	AR-D17/D18/D19
DPPD1	Paper transport sensor 1	Detects paper transport.	AR-D17/D18/D19
DPPD2	Paper transport sensor 2	Detects paper transport.	AR-D17/D18
DPPD3	Paper transport sensor 3	Detects paper transport.	AR-D17/D18
DTRC	Transport clutch	Controls ON/OFF of the transport roller.	AR-D17/D18/D19

#### 補修部品のランク付

市場における補修部品の在庫管理が、適正に運営出来る手助けとなることを、目的とします。

Aランク : メンテナンスパーツ、メンテナンスパーツには入っていないがメンテナンスパーツに近い消耗パーツ。

Bランク : 性能・機能パーツ(センサー、クラッチ等の電気パーツ)、消耗パーツ。

Eランク : 基板含むユニットパーツ。

Dランク : 整備パーツ (外装、パッキング、同梱パーツ)。

Cランク : 上記ランク以外のパーツ(基板の子部品を除いたもの)。

#### DEFINITION

The definition of each Rank is as follows and also noted in the list

- A: Maintenance parts, and consumable parts which are not included in but closely related to maintenance parts.
- B: Performance/function parts (sensors, clutches, and other electrical parts), consumable parts.
- E: Unit parts including PWB.
- D: Preparation parts (External fitting, packing, parts packed together).
- C: Parts other than the above (excluding sub components of PWB).

安全性・信頼性確保のため部品は、必ず正規のものをご使用下さい。

▲ 印の商品は、安全上重要な部品です。交換をする時は、安全及び性能維持のため必ず指定の部品をご使用下さい。

Because parts marked with "\_\textstyle{\Lambda}" is indispensable for the machine safety maintenance and operation, it must be replaced with the parts specific to the product specification.

- 当モデルのサービス資料には、この資料以外にサービスマニュアル(回路図含む)があります。合わせてご利用下さい。
- O Other than this Parts Guide, please refer to documents Service Manual (including Circuit Diagram) of this model.
- O Please use the 13 digit code described in the right hand corner of front cover of the document, when you place an order.
- O For U.S. only-Use order codes provided in advertising literature. Do not order from parts department.

# 注意

- ・電池を正しく交換しないと爆発を起こす危険がある。
- 機器製造者が指定したものと同一型名のもの、又は、 その同等の電池とのみ交換すること。
- ・使用済みの電池は、製造者の指示に従って処分すること。

#### CAUTION FOR BATTERY REPLACEMENT -

(Danish)

ADVARSEL!

Lithiumbatteri – Eksplosionsfare ved fejlagtig håndtering. Udskiftning må kun ske med batteri af samme fabrikat og type.

Levér det brugte batteri tilbage til leverandoren.

(English)

Caution!

Danger of explosion if battery is incorrectly replaced.
Replace only with the same or equivalent type
recommended by the manufacturer.

Dispose of used batteries according to manufacturer's instructions.

(Finnish)

**VAROITUS** 

Paristo voi räjähtää, jos se on virheellisesti asennettu. Vaihda paristo ainoastaan laitevalmistajan suosittelemaan tyyppiin. Hävitä käytetty paristo valmistajan ohjeiden mukaisesti.

(French)

ATTENTION

Il y a danger d'explosion s' il y a remplacement incorrect de la batterie. Remplacer uniquement avec une batterie du même type ou d'un type équivalent recommandé par le constructeur.

Mettre au rebut les batteries usagées conformément aux instructions du fabricant.

(Swedish)

VARNING

Explosionsfara vid felaktigt batteribyte.
Använd samma batterityp eller en ekvivalent
typ som rekommenderas av apparattillverkaren.
Kassera använt batteri enligt fabrikantens
instruktion.

(German)

Achtung

Explosionsgefahr bei Verwendung inkorrekter Batterien.
Als Ersatzbatterien dürfen nur Batterien vom gleichen Typ oder vom Hersteller empfohlene Batterien verwendet werden.
Entsorgung der gebrauchten Batterien nur nach den vom Hersteller angegebenen Anweisungen.

# - CAUTION FOR BATTERY DISPOSAL

(For USA, CANADA)

Contains lithium-ion battery. Must be disposed of properly.

Remove the battery from the product and contact federal or state environmental agencies for information on recycling and disposal options.
